

## Dmytryka Jacobs Engineers, Inc.

Dmytryka Jacobs Engineers, Inc. (DJE) specializes in the design, development, and implementation of electrical, instrumentation, and control systems. Because there was a need for a specialty firm such as this, DJE was formed in June of 1994. The principals' combined experience of over 100 years in the industry allows DJE to understand not only the technical needs of their clients, but also the fiscal realities faced each day. When working with DJE, clients are always dealing with key members of the firm; those with the responsibility and authority to make sure the needs and expectations are met. DJE is committed to serving their clients by doing what they say they will, on time and within budget.
